MALWAREBYTES ONEVIEW

Endpoint security management platform for MSPs

For managed service providers (MSPs), delivering high-quality security services and keeping customer environments free from malware requires a skilled team with access to highly-effective security tools. Yet, many MSPs face constrained staff resources with a team that is often overloaded with triaging alerts and responding to customer support cases. Compounding this overload problem is the skyrocketing cost and complexity of managing multiple security solutions, the latter of which leads to lengthy incident response times and business inefficiencies that limit growth.

Malwarebytes OneView provides MSPs with a powerful and affordable security management platform that gives security teams maximum control. With centralized access into client sites, OneView streamlines management of endpoint security, licensing subscriptions, role-based access, customer reporting, add-on modules, and more. And with a direct link to the Malwarebytes Level 2 Support Team, OneView makes it easy for your team to get guidance on complex security challenges as they arise.

KEY FEATURES

Single multi-tenant console
OneView's multi-tenancy enables you to streamline operations with centralized management of customer server and workstation endpoints, license subscriptions, reporting, and global policies.

Subscription management
Intuitive design allows you to easily track and manage customer license subscriptions across sites and provide a higher level of service and attention.

Client endpoint administration
OneView's guided user interface simplifies control over security policies, software updates, role-based access, and more.

Role-based access control
Flexible role-based access control allows you to easily create and assign permissions to both your team members and your customers.

Precise, thorough remediation
As threats occur, OneView offers intuitive and automated controls for rapid response powered by our award-winning remediation technology.

Endpoint activity reporting
OneView provides a wide range of customer reports that provide detailed data showing the value of your MSP security services.

1-click module additions
Vulnerability Assessment, Patch Management, and other add-on modules provide additional layers of security and are easily enabled within OneView.

INTEGRATIONS THAT STREAMLINE YOUR SECURITY PRACTICE

With native integrations into leading remote monitoring and management (RMM) and professional services automation (PSA) platforms, Malwarebytes OneView enables your MSP team to streamline operations. By exposing OneView's core functionality of endpoint security and customer management to the RMM and PSA platforms, MSPs are able to reduce the number of tool consoles, simplify their response routines, and save precious time that can be used for critical projects.

POWERED BY THE MALWAREBYTES EDR PLATFORM

With OneView, you have direct and simplified management of Malwarebytes EDR, which provides powerful and effective threat detection, isolation, and remediation for your customer workstations and servers. Along with Malwarebytes' patented ransomware detection, it includes seven layers of protection, multi-mode isolation, and automated malware clean up. It's designed to be easy for all security users – from emerging to the most experienced, offering clear visual cues to drive action and powerful tools for forensic analysis.

Key highlights of Malwarebytes EDR include:

- EDR that aligns with the skillset of your security team
- Advanced threat prevention
- Thorough remediation of cyberthreats
- 72-hour Ransomware Rollback
- Works within MITRE, NIST, ENISA frameworks

TOP BENEFITS

Business benefits

- Reduce operational overhead of your security practice
- Grow customer satisfaction with award-winning endpoint security

Customer benefits

- Maintain customer business continuity by reducing their security incidents
- Increase customer peace of mind that their workers are being kept secure

Security team benefits

- Improve team efficiency and morale
- Open cycles for new billable projects
