

Top 5 Cyber Protections

# SMBs

need to implement a.s.a.p.

Cybersecurity is everybody's main concern. It needs immediate action.

# 77%

of SMBs worry they will be the target of an attack in the next 6 months.

## WEB IS THE MAIN ATTACK SOURCE TARGETING SMBs.

### 01.

#### Filter The Web & DNS

It is possible to get compromised without noticing by simply visiting a web page on the Internet. You need to filter the Internet and benefit from its good parts safely.

#### Protect Credentials

You can lose your bank account, trading account, Amazon, or QuickBooks account, and their credentials can get compromised, putting your money and business at risk.

### 02.

### 03.

#### Control Downloads

Ransomware starts with a download. It would be best to avoid unnecessary downloads and implement controls for your employees.

#### Increase Cyber Vigilance

Can text messages be phishing scams impersonating your bank or investment account? The answer is yes!

### 04.

### 05.

#### Improve Own Cyber Hygiene

Attackers never stop improving themselves, and so you should do. Improvement can happen once you start monitoring and measuring.
