AI Powered

Guardz utilizes AI for advanced cybersecurity, automating detection and response across user data, devices, emails, and cloud directories.

Multi-Tenant

Centrally navigate the security posture of multiple clients, each with its unique environments, and see the potential threats and remediation plan from a single platform.

Unified Detection

Stay ahead of threats with our user-centric approach, enabling you to automatically receive real-time alerts as soon as a threat is verified or action is required.

Automated Remediation

Respond swiftly to cyber incidents with one-click remediation and powerful playbooks that connects the dots.

Tailored Risk Reports

Generate reports that reflect client's digital risks as well as the value of your MSP service from internal and external perspectives.

Branding

Enhance your brand and make your MSP services more visually appealing and engaging, by white labeling the Guardz platform

Insurance Coverage (US only)

Guardz streamlines cyber insurance for your MSP business & your clients based on the active protection and security posture of your clients.

Cost of Not Taking Action

Missed Revenue Potential

The inability to support certain multiple point technologies can lead to missed revenue opportunities

Lack of Efficiency

Balancing multiple dashboards while ensuring security efficacy is a delicate balance, with each tweak posing risks.

Reputational Damage

A client's data breach due to lack of cybersecurity measures can cause severe reputational damage

Increased Financial Risk

MSPs neglecting cybersecurity risk breaches and forfeit opportunities in the cyber insurance market

Risk of Cyber Attack

Businesses face increasing multi-vector cyber attacks due to perceived less robust security measures
